

Car Details Module

The Car Details Module provides comprehensive and structured information about each car available in the system. This module plays a crucial role in helping users deeply understand a vehicle before making a decision. Each car has a dedicated page that includes complete specifications such as price, engine details, mileage, fuel type, transmission, safety features, and additional functionalities. This ensures that users get all necessary information in one place. The module also highlights pros and cons of each car, making it easier for users to evaluate strengths and weaknesses. It includes real-world usage insights such as suitability for city driving, long-distance travel, and family use. Additionally, the system provides estimated maintenance cost and basic running cost information, helping users understand long-term expenses associated with the vehicle. High-quality images (front, rear, interior, and side views) are displayed to enhance user understanding and experience. This module is integrated with the comparison, recommendation, and filtering systems to ensure seamless navigation. Technologies Used: - HTML: For structuring the car details page. - CSS: For styling and responsive design. - JavaScript: For dynamic content display and image sliders. - Python (Flask): For backend processing and fetching car details. - Database (MongoDB/MySQL): For storing detailed car information. Overall, the Car Details Module provides a complete and user-friendly view of each car, helping users make informed and confident decisions.
