

Market Insights & Cost Estimation Module

The Market Insights & Cost Estimation Module provides users with financial and practical insights related to car ownership. This module helps users understand the long-term costs and value associated with different cars. It includes features such as resale value prediction, running cost per kilometer, and maintenance cost estimation. These insights allow users to evaluate not just the purchase price, but also the overall cost of owning a car. The module calculates approximate fuel costs based on mileage and fuel prices, giving users a clear idea of daily and monthly expenses. It also estimates maintenance costs based on car type, usage, and service requirements. An EMI calculator is integrated into this module, allowing users to estimate monthly payments based on loan amount, interest rate, and tenure. This helps users plan their finances effectively before making a purchase. The module works closely with the car database and recommendation system to provide accurate and relevant insights. It enhances decision-making by combining technical data with financial analysis. Future enhancements may include real-time fuel price updates, insurance cost estimation, and advanced predictive analytics. Technologies Used: - HTML: For displaying cost details and calculator interface. - CSS: For styling and responsive design. - JavaScript: For dynamic calculations and user interaction. - Python (Flask): For backend processing and calculation logic. - Database (MongoDB/MySQL): For storing and retrieving cost-related data. Overall, the Market Insights & Cost Estimation Module helps users make informed financial decisions by providing a clear understanding of total car ownership costs.
